

Queries

- Create field
 - `const datas = dataSchema.create(req.body)`
- Get a list of all the documents available in the collection
 - `Const datas = dataSchema.find({username : { $regex : search, $options : "i"}}).sort(sortBY)`
- Edit the particular document data
 - `Const datas = dataSchema.findOneAndUpdate({_id:req.params.id},{set:{object},{new : true})`

Sample data to test

```
[
  {
    "userName": "Steve",
    "fieldName": "I am in chennai i am planning to move out of station"
  },
  {
    "userName": "John wick",
    "fieldName": "Please submit the task in time"
  },
  {
    "userName": "Roger",
    "fieldName": "I am preparing for exam"
  },
  {
    "userName": "stark",
    "fieldName": "lorem ipsum"
  }
]
```
